

White Paper

BitDust: The White Paper

"Built on Scarcity. Defined by Rarity. Fueled by Imagination."

Core Philosophy: Scarcity is the Utility

BitDust isn't trying to change the world. It's not here to save the planet, optimize a blockchain, or solve inflation. It exists for one reason only: to prove that nothing can be everything when it's rare enough.

No Utility. No Promises. No Roadmap.

No staking. No AI. No ecosystem. No 100-page white papers pretending to be blueprints for salvation.

BitDust is a bold, intentional anti-utility token. It makes no claims, holds no expectations, and offers no features.

And that's exactly the point.

The Scarcity Thesis

Total supply is 10,000 tokens, minted on Raydium. 3,000 were lost in the cosmos, 7,000 fell to earth to be circulated.

With 70% locked into a liquidity pool and 0% held by the creator, the supply curve is flat...
and the demand curve is chaos.

If Bitcoin taught us anything, it's this: "The fewer the coins, the louder the roar."

Scarcity isn't just a mechanism. It's a message.

Be One of the Few

In a world of:

- Trillions of tokens

White Paper (cont.)

- Forked whitepapers
- Meme coins with no soul...

BitDust is the rebellion.

Owning even 1 BitDust means you hold a piece of the myth - A one-of-a-kind digital relic created without promises, yet holding infinite potential because of its rarity alone.

This Is Not Financial Advice

BitDust may go to the moon. Or it may go to zero.

But one thing is certain - You'll own what others never will: an unapologetic masterpiece of scarcity.

In Summary

BitDust is not backed by hype. It's backed by emptiness.

And in that emptiness lies its power.

"Scarcity doesn't need a purpose. It just needs believers."

Precautions

BitDust Precautions

Real Talk Before You Buy

Step 1: Fund Your Wallet Carefully

To buy BitDust, you must first fund a wallet with one of the following tokens on the Solaxy Layer-2 network:

- SOLX
- SOL
- USDC
- USDT

Do NOT send funds from a centralized exchange (like Coinbase or Binance) directly to Raydium.

You must use a self-custody wallet like:

- Solaxy Wallet (preferred)
- Phantom
- Solflare
- Trust Wallet (with caution)

If you send the wrong tokens or from the wrong chain - they will be lost. There are no refunds.

Step 2: Connect Your Wallet to Raydium

To buy BitDust:

1. Visit the official BitDust website
2. Click the Buy BitDust on Raydium button
3. Connect your wallet when prompted

Precautions (cont.)

4. Choose your funding token (SOLX, SOL, USDC, or USDT)

5. Review the swap carefully before confirming

Always double-check you're on the correct network (Solaxy Layer-2). Wrong network = failed or lost transactions.

Step 3: On-Chain Verification

After you buy, verify your BitDust purchase directly on the blockchain using explorers like:

- SolanaFM (<https://solana.fm>)
- SolScan (<https://solscan.io>)
- Solana Explorer (<https://explorer.solana.com>)

Search your wallet address and confirm:

- The BitDust token is present
- The correct token logo or mint name appears
- The token contract address matches

Verify the Official BitDust Contract Address

The only official BitDust token will be listed on Raydium DEX.

Contract address will be pinned in:

- The official BitDust website
- BitDust X (Twitter) account

Never copy contract addresses from random social media posts, DMs, or fake websites.

Precautions (cont.)

Final Thoughts: Protect Yourself

Never rush into a buy.

Bookmark the official site.

Triple-check the token contract.

Verify your tokens on-chain.

Never send funds to anyone claiming to "help" with the purchase.

BitDust isn't just rare. It's also surrounded by imitators.

Stay sharp. Stay official.

FAQ

BitDust FAQ

If you have to ask, it's probably here.

What is BitDust?

BitDust is a scarcity-based token with no utility, no promises, and no roadmap. Its value comes only from its rarity.

What chain is BitDust on?

BitDust is launched on the Solaxy Layer-2 network, built over Solana.

How many tokens exist?

10,000 tokens. That's the total supply. Forever.

What does BitDust do?

Absolutely nothing.

And that's the point.

Is the liquidity locked?

Yes - locked for 90 days at launch. After that, there's no guarantee of future lock extensions.

How do I buy BitDust?

1. Fund your wallet with SOLX, SOL, USDC, or USDT on Solaxy L2
2. Connect to Raydium via the official BitDust website
3. Swap and confirm the transaction

Can I lose my tokens?

Yes. If you:

- Use the wrong chain

FAQ (cont.)

- Send funds from a centralized exchange
- Copy a fake contract address
- Trust random links or scammers

Your funds may be lost forever. Always verify the contract and use the official website.

Which wallets can I use?

Solaxy Wallet (preferred), Phantom, Solflare, Trust Wallet (with caution)

Is this an experiment?

Yes. BitDust is a psychological, social, and economic experiment built around pure scarcity.

Who created BitDust?

An anonymous force of curiosity, art, rebellion, and code. You're not here for the dev - you're here for the Dust.

Is there a Telegram or Discord?

Nope.

All official info flows through:

- The BitDust website
- BitDust X (Twitter)

What's the BitDust contract address?

The official token contract address will be:

- Pinned on the BitDust site
- Shared on BitDust X (Twitter)

FAQ (cont.)

- Available directly on-chain via SolanaFM, SolScan, etc.

Never trust DMs or unofficial channels.

Will BitDust go up in value?

Nobody knows. That's the game. Scarcity is the only driver.

Can I stake BitDust?

No.

Will there be an airdrop?

No.

Why would anyone buy BitDust then?

Because 10,000 tokens is ridiculously scarce.

And scarcity makes people crazy.

Is BitDust a joke?

If it is - it's the most serious joke in crypto.

Wallet

Wallet

Solaxy Wallet

The Official Wallet of the BitDust Experience

Mentioned in the Precautions. Recommended in the FAQ.

The Solaxy Wallet isn't just another wallet. It's the preferred access point for BitDust because it was designed to speak the native language of the Solaxy Layer-2 - where BitDust lives.

It's also the only wallet guaranteed to receive native tokens like BitDust without needing third-party tools or token imports.

Why Solaxy Wallet?

- Pre-configured for Solaxy Layer-2
- Designed for seamless interaction with native Solaxy tokens
- Built to support future Igniter Protocol launches like BitDust and DUCECOIN (coming soon)
- Expected integration with Neptoon DEX and Solaxy bridge (pending launch updates)

Where to Get It

The Solaxy Wallet is expected to be available via:

- The official Solaxy website
- Apple App Store (iOS) and Google Play (Android) (once released)
- Browser extension for Chrome/Brave (pending confirmation)

Always verify links before downloading. Do not trust unverified app listings.

You Have Options

Solaxy Wallet is preferred - but not your only option.

Wallet (cont.)

The following wallets are expected to support BitDust and Solaxy tokens:

- Phantom
- Solflare
- Trust Wallet (with caution)

These alternatives may help fill any temporary feature gaps.

What Has Not Been Verified (Yet)

As of the writing of this document, the following items have not been verified:

- No public download link is available (App Store / Google Play / Chrome Extension)
- BitDust auto-detection in wallet is not confirmed
- In-wallet Neptoon DEX swapping is not live
- No confirmation on token balance viewing or NFT support
- Cross-chain bridge UI is not yet deployed
- No official security audit has been published

What's in the Pipeline

Based on Solaxy announcements and protocol alignment:

- Neptoon DEX integration
- mint support
- Hyperlane or internal bridging
- Compatibility with BitDust, DUCECOIN (coming soon), and other ecosystem tokens

Final Word

The Solaxy Wallet is built by the same forces behind BitDust.

Wallet (cont.)

It's not just compatible - it's part of the story.

If you're holding BitDust, this is the wallet it was born to live in.

The 22

The 22

Guardians of the Spark. Keepers of the Dust.

What Is The 22?

"The 22" is a sacred and symbolic list.

It represents those who, through love, loyalty, character, or impact, have shaped the BitDust founder's journey - not just in crypto, but in life.

This isn't a DAO. It's not a governance committee. It's not a reward tier.

It's a bond.

A digital torch passed from one human moment to another - 22 flames that lit the path when the world was dark.

Where It Began

At the launch of BitDust, only 11 out of the 22 names had been recognized and inscribed.

This wasn't a limitation. It was a truth: not all 22 are known at the start.

Some emerge through time. Some prove themselves in silence. Some are still watching from the shadows - waiting for their flame to be acknowledged.

12 of the 22 have been identified

1. Mom, mother, she believed in me
2. Marie Jho, Wife, my true love and friend
3. Bob, Brother, a real man
4. Angela, Sister, a creator
5. Diane, Sister, a trailblazer

The 22 (cont.)

6. Ashely, Daughter, the love of my life

7. Joi, Daughter, the love of my life

8. Mel, Friend, best friend

9. Mario, Friend, Mario being Mario

10. Don, Friend, swims like a fish

11. Austin, Son-in-law, he loves lemonade

12. Brandon, Son-in-law, a true salesman

What Comes Next?

The next 10 will reveal themselves through action, character, and connection.

There are no applications. No timelines. No public votes.

Only a private flame, quietly observed - then immortalized when the moment feels right.
