

BitDust White Paper

Ticker: btd

Contract Address: 6JvXx5usmEHXB3RZjjrk94mcxqAWpFXazSqe9RBSE26z

Website: <https://bitdustcoin.io>

1. Introduction

BitDust is a community-driven scarcity experiment built on Solana. With a total supply of only 10,000 tokens, BitDust is one of the rarest meme coins in existence.

Our philosophy is simple: radical scarcity + radical honesty.

BitDust launched successfully and trades actively. During the mint process, the token's update authority was not secured under our main wallet. As a result, the token shows as "unverified" on explorers and DEXs.

This did not affect the token's functionality — BitDust trades, holds value, and has built recognition. But it did affect credibility. While most projects would hide this fact, BitDust stands apart: we own our errors, we learn, and we improve.

2. Lessons Learned

- Transparency over optics: BitDust acknowledges openly that its unverified tag is the result of a technical misstep. This transparency strengthens credibility.
- Immutable scarcity: The supply of BitDust is permanently capped at 10,000 tokens (ticker: btd).
- Process hardening: Future projects will operate with clear control of token authority to prevent repeat errors.
- Community trust matters: By being open about both successes and mistakes, BitDust builds trust with serious participants.

3. Tokenomics

Supply

- Total Supply: 10,000 btd
- Decimals: 6

Distribution

- 90% Liquidity Pool (Raydium/DEX, locked for 90 days)

Symbol Clarification

We recognize that other tokens in circulation also use the BTD ticker. We embrace competition in the spirit of the broader crypto community and wish those projects success in their journeys.

For BitDust, authenticity is anchored to our official contract address, which uniquely identifies the btd token on Solana. The contract address is the final source of truth.

4. Roadmap

Phase 1 – Launch (Now)

- Token minted and live on Solana.
- Liquidity added and locked for 90 days on Raydium.
- Website launched: <https://bitdustcoin.io>
- White Paper released.

Phase 2 – Growth (1–3 months)

- Apply for Solana token list inclusion.
- Engage micro-influencers on X (Twitter).
- Host meme contests & community engagement.
- Build a BitDust dashboard (simple web tracker).

Phase 3 – Credibility (3–6 months)

- Transparent liquidity reports.
- Verified status on explorers & DEXs where possible.
- Listings on secondary aggregators (CoinGecko, CMC).
- Explore cross-chain exposure (Wormhole bridge).

Phase 4 – Legacy (6–12 months)

- Release of BitDust v2 with hardened processes and authority control.
- Community-driven proposals for governance and meme culture.
- Maintain low-supply narrative as core identity.

5. Community & Credibility

Strengths

- Scarcity: 10,000 tokens total — nothing rarer.
- Transparency: BitDust documents every move, including mistakes.
- Community-first: BitDust is built openly with nothing to hide.
- DIY ethos: A grassroots project without VC influence.

Credibility Strategy

- Publish liquidity lock proofs publicly.
- Weekly updates via Twitter/Telegram.
- Radical honesty as a unique branding angle in a world full of rugs and hype.

6. Credibility Campaign (Parallel to Roadmap)

BitDust acknowledges that the token currently displays an “unverified” tag on certain Solana explorers. While this tag does not affect token functionality or value, it can create hesitation for new participants. To address this directly, BitDust has launched a Credibility Campaign running alongside the Roadmap.

This campaign is focused on transparency, on-chain proof, and external validation — three pillars of long-term trust.

On-Chain Proofs

- Liquidity lock verification (Raydium/Jupiter pools).
- Mint authority disabled (supply hard-capped at 10,000 btd).
- Always point trades to the official contract address.

Explorer & Token List Verification

- Submission to the Solana Token List.
- Explorer verification requests to Solscan and Solana.fm.

Aggregator & Listing Visibility

- Promote Jupiter as the primary swap option (routes by contract, bypasses metadata quirks).
- Submit for listings on CoinGecko and CoinMarketCap.

Community Trust Signals

- Weekly progress updates on X and Telegram.
- Website tracker page showing liquidity lock, contract, and supply proofs.
- Radical honesty as a defining brand feature.

External Endorsements

- Mentions by Solana-focused micro-influencers.
- Presence in Reddit threads and newsletters.
- Optional third-party verification through agencies (e.g., Assure Defi, SolidProof).

7. Conclusion

BitDust is more than a meme coin. It is a statement: scarcity + transparency = credibility.

We don't claim perfection. We claim honesty. We don't chase hype. We chase trust. In a sea of over-inflated promises, BitDust is simply rare, transparent, and here to stay.

The official BitDust token is defined by its contract address. While others share the BTD ticker, only one is btd (BitDust). We wish our peers success — strong projects lift the entire ecosystem.

8. The 22 — Keepers of the Flame

BitDust is scarcity embodied, but scarcity without meaning is empty. The 22 are the heartbeat of this project — family, friends, creators, and companions whose loyalty, humor, and love give BitDust permanence beyond code.

Their names are not governance. They are remembrance, honor, and the philosophy of this token: that rarity becomes eternal when bound to truth and love.

Daddy — Father, my Hero

Though he has passed, his strength remains the root of all I am. Protector, guide, and example — his flame lives on through me.

Mom — Mother, the most trustworthy and loving of all.
The first to give faith when faith was scarce.

Marie Jho — Wife, my true love and friend
The bond that makes life whole.

Diane — Sister, a trailblazer
Courage to lead where few would go.

Angela — Sister, a creator
Inspiration woven into design and purpose.

Bob — Brother, a real man
Loyalty carried in blood.

Ashely — Daughter, the love of my life
Light that endures in every moment.

Joi — Daughter, the love of my life
Joy embodied, the promise of tomorrow.

Mel — Friend, best friend
A rare constant in a fleeting world.

Mario — Friend, Mario being Mario
Proof that authenticity is gold.

Don — Friend, swims like a fish
A reminder of freedom and play.

Austin — Son-in-law, he loves lemonade
Simplicity that refreshes the soul.

Brandon — Son-in-law, a true salesman
Conviction that words can move mountains.

Elliott — Brother-in-law, geopolitical mastermind.

Closing Thought: The 22 make BitDust eternal. They prove that code may run on machines, but value lives in people. They are the elegance, the sincerity, and the flame that scarcity alone could never hold.
