White Paper

Background

BitDust is a decentralized digital asset designed to embody scarcity, transparency, and accessibility in the cryptocurrency market. Built on the Solana blockchain, BitDust provides a fixed supply of 10,000 tokens to ensure value preservation through limited availability. The absence of inflationary token issuance means holders can rely on the permanence of the supply structure.

This token is intended for collectors, enthusiasts, and long-term investors seeking exposure to a project where token scarcity is a primary value driver. BitDust is not marketed as an investment product or security. Its primary value proposition lies in its fixed supply, verifiable on the blockchain, and its seamless integration with decentralized exchanges such as Raydium.

Key features include:

1. Fixed Supply: Only 10,000 tokens exist; no additional tokens will ever be minted.

2. Decentralized Exchange Integration: All purchases and sales are handled exclusively through Raydium, ensuring transparent and trustless transactions.

3. Transparent Ledger: All token movements are permanently recorded on the Solana blockchain for public verification.

Precautions

The following considerations are essential for anyone interacting with BitDust:

1. Market Risk: Cryptocurrency prices are volatile. The value of BitDust can increase or decrease significantly within short periods.

2. No Central Authority: BitDust operates without a centralized controlling body. There are no guarantees of price stability, and no institution will intervene in market fluctuations.

3. Irreversible Transactions: Once a transaction is confirmed on the blockchain, it cannot be reversed. Always verify addresses and amounts before proceeding.

4. Wallet Security: Store your wallet's private keys securely. Loss of private keys means permanent loss of access to your BitDust holdings.

5. Exchange Use: Raydium is the exclusive exchange reference for BitDust. Users must ensure they are interacting with the correct BitDust token contract address to avoid counterfeit assets.

6. Regulatory Environment: Laws and regulations regarding cryptocurrency vary by jurisdiction and may change. Ensure compliance with all applicable laws before participating.

Frequently Asked Questions (FAQ)

Q1: What is the total supply of BitDust?

A1: BitDust has a fixed total supply of 10,000 tokens. No additional tokens will be created.

Q2: Where can I buy BitDust?

A2: BitDust is available exclusively on Raydium, a decentralized exchange on the Solana blockchain.

Q3: What do I need to purchase BitDust?

A3: You will need:

   a. A Solana-compatible wallet (e.g., Phantom).
   b. SOL (Solana) tokens to cover both the purchase and network transaction fees.
   c. The verified BitDust contract address.

Q4: How do I verify I am buying the correct BitDust token?

A4: Always confirm the contract address matches the official one published in this document and on the BitDust official channels.

Q5: Is BitDust an investment?

A5: BitDust is not marketed as an investment product. Its value is based on scarcity, collectibility, and market demand.

Q6: Can I sell my BitDust tokens?

A6: Yes, BitDust can be sold on Raydium at any time, subject to market liquidity.

Wallet

To store, send, and receive BitDust tokens, a cryptocurrency wallet compatible with the Solana blockchain is required. Recommended steps include:

1. Selecting a Wallet: Use a reputable Solana-compatible wallet such as Phantom or Solflare.
2. Funding Your Wallet:

a. Purchase SOL (Solana) tokens from a reputable centralized exchange such as Coinbase, Binance.US, or Kraken.

b. Transfer SOL to your Solana-compatible wallet.

3. Importing BitDust to Your Wallet:

a. Open your wallet application.

b. Select "Add Token" or "Import Token."

c. Paste the verified BitDust contract address into the required field.

4. Security Practices:

a. Enable two-factor authentication on any related exchange accounts.

b. Backup your wallet recovery phrase offline in multiple secure locations.

c. Never share your private keys or recovery phrase with anyone.

Verified Contract Information

Blockchain: Solana

Token Name: BitDust

Total Supply: 10,000 tokens

Contract Address: 6JvXx5usmEHXB3RZjjrk94mcxqAWpFXazSqe9RBSE26z

Primary Exchange: Raydium
